                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Q_{Y}
                                                                                                                                                                                                                                 The sequence is that of the cDNA encoding the human erythrocyte anion-transport protein (band 3). Nucleotides 1612-1662 (ANION 1) or 2434-2481 (COOH) of this sequence encode a peptide which is immunore reactive with antibodies to senescent cell antigen (SCA). The antigen and peptides can be used in any method or technique involving or requiring the inhibition of the binding of senescent cell igG to senescent cells in vitro or in vivo. The prods. can be used in to examine various physiological, biochemical, and immunological mechanisms in humans and other animals, such as those relating to cellular ageing, degeneration, and life span; removal of senescent cells; anion transport across cellular membranes; disease cellular ageing, degeneration, and life span; removal of senescent cells; anion transport across cellular membranes; disease to thrombocytopenia purpura; other autoimmune disease mechanisms, such as rheumatoid arthritis and systemic lupus crythematosus; and other diseases such as those involved in malata and cancer. The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. Z33891 to 234338, and Y41685 to Y41774 represent polynucleotide and polypeptide
                                                                                                                                                                                                                                                                                               New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders -  \frac{1}{2} \int_{-\infty}^{\infty}

The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. C78600 to C78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.

The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. CC Also described are: (I) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). CC (I) and (II) are useful for the development of vaccines against CC (I) and (II) are useful for the development of vaccines against CC antibody raised to immunogens comprising the sequences of (I) are CC (I) (especially when they are rifins or secreted or membrane proteins) CC can aid the identification of infection with P. falciparum. Furthermore, CC (II) (especially when they are rifins or secreted or membrane proteins) CC can aid the identification of drugs to treat or prevent P. falciparum CC p. falciparum. Sequencing of the Plasmodium chromosome 2 and the complexity of the parasition of proteins encoded by it will help to expand CC our understanding of parasite biology, a process hampered by the CC complexity of the parasitic lifecycle, and provide new targets for CC resistance to insecticides have led to a resurgence of malaria in many CC parts of the world, and there is a pressing need for vaccines and new CC drugs. A70078 to A70287 and B18144 to B18352 represent nucleotide and CC protein sequences given in the present invention, but which are not expecifically mentioned within the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             proteins encoded by chromosome 2 of the human
plasmodium falciparum, useful as antimalarial
diagnosis of P.falciparum infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2000-365347/31.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hoffman S, Carucci D,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score

                                                                   source
                                                                                                            Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NV. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library, or filters for hybridization from the BACPAC Resource Center can be

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library. Or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see <a href="http://www.fruitily.org">http://www.fruitily.org</a> The BDGP Drosophila melanogaster BAC 11 threat the Drosophila melanogaster BACS.

The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the EcoRI digestion of Drosophila DNA provided by the BDGP from the Logenite Strain y2: on bw sp. the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://dx.doi.org/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /organism="Drosophila melanogaster"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_name: /SIDS6/gcgdata/geneseq/geneseqn/NA1999.DAT:X25733
This sequence represents the Bacillus subtilis cysteine protease CP1 coding sequence. The invention relates to new Gram-positive bacteria, especially Bacillus, containing mutations in, or deletion of, at least part of the gene encoding cysteine protease (CP)1, CP2 (x25734) or CP3 (X25735), so that CP-related proteolytic activity is lost. The bacteriare used for expressing heterologous proteins, particularly hormones, growth factors, cytokines or especially enzymes, e.g. protease, carbohydrase, lipase, isomerases (racemase, epimerase, tautomerase or mutase), transferase, kinase and phosphatase. CP1-3 are used e.g. in soaps, dishwashing compositions, contact lens cleaners or laundry detergents, also for peptide hydrolysis, waste or textile treatment, the colored contact the contact of the contact of the colored contact the contact of the contact of the colored contact of the colored contact of the colored colored contact of the colored colored colored contact of the colored col
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gram-positive bacterium with mutated or deleted gene protease 1, 2 or 3 - used to express proteins with re

                                                                            This sequence represents the Bacillus subtilis cysteine protease CP3 coding sequence. The invention relates to new Gram-positive bacteria, especially Bacillus, containing mutations in, or deletion of, at least part of the gene encoding cysteine protease (CP)1 (X25733), CP2 (X25734) or CP3, so that CP-related proteolytic activity is lost. The bacteria are used for expressing heterologous proteins, particularly hormones, growth factors, cytokines or especially enzymes, e.g. protease or mutase), transferase, isomerases (racemase, epimerase, tautomerase or mutase), transferase, kinase and phosphatase. CP1-3 are used e.g. in soaps, dishwashing compositions, contact lens cleaners or laundry detergents, also for peptide hydrolysis, waste or textile treatment, to cleave fusion proteins and as animal feed additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gram-positive bacterium with mutated or deleted gene for cysteine protease 1, 2 or 3 - used to express proteins with reduced proteolytic degradation, e.g. proteins, growth factors or enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Fig 6A-B; 31pp; English.

The invention relates to new Gram-positive bacteria, especially Bacillus, containing mutations in, or deletion of, at least part of the gene encoding cysteine protease (CP)1 (X25733), CP2 or CP3 (X25735), so that CP-related proteolytic activity is lost. The bacteria are used for expressing heterologous proteins, particularly hormones, growth factors, cytokines or especially enzymes, e.g. protease, carbohydrase, lipase, isomerases (racemase, epimerase, tautomerase or mutase), transferase, kinase and phosphatase. CP1-3 are used e.g. in soaps, dishwashing compositions, contact lens cleaners or laundry detergents, also for peptide hydrolysis, waste or textile treatment, to cleave fusion proteins and as animal feed additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gram-positive bacterium with mutated or deleted gene for cysteine protease 1, 2 or 3 - used to express proteins with reduced proteolytic degradation, e.g. proteins, growth factors or enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cysteine protease; Gram-positive bacteria; mutation;

X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-NOV-1997;

The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (V55134 to V55524) recorded con it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391 (V52134 to V55524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a compose of the sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hypridise to the target sequence and isolating the nucleic acid color molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the sequence and isolating the amplification and colorating the amplified sequences. The computer readable medium can be used in a computer based system for identifying fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, and pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptococcus pneumoniae; S. pneumoniae; genome; diagnosis; assay; computer readable medium; vaccine; pharmaceutical composition; ds.

for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the

memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelld infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used

                                                                           5646
```

The present sequence encodes a novel polypeptide, which is optionally expressed in NCIMB 40771. The polypeptide, and polynucleotide encoding it, are derived from Staphylococcus aureus. Cells expressing ligands binding the polypeptide can be used to isolated candidate compounds

that bind and inhibit the activity of the polypeptide.

This sequence represents one of 5191 Staphylococcus aureus DNA sequences confit the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the Saureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against 5 aureus infection of Saureus in a sample. Saureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating computer readable medium.
                                                                                                                                                                                                                                                                                                                                                                        Polynucleotide(s) and proteins derived stored on computer readable medium and anti-S.aureus vaccines

                                                                                                                                                                X20248 to X20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Borrelia burgdorferi; spirochete; bacterium; pathogen; I epidemic relapsing fever; endemic relapsing fever; Lyme infection; diagnosis; characterisation; detection; ds.

Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 910715 BP; 327171 A; 129646 C; 130753 G; 323091 T; 54 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A heterologous gene encoding a gene product which confers trichothecene resistance can be used to transform plant cells to make them resistant to fungal infection. The transformation method is useful for preventing mycotoxin contamination of a plant, particularly a crop plant such as wheat, maize, barley or rice, and for reducing and/or preventing the growth of a fungus of the genus fusarium that produces a trichothecene, preferably comprising a C-3 hydroxyl group, by growing transformed crop plants in an area which is moderate to severe fungal infestation. Plasmid pcIB9818 comprises the Zea mays ubiquitin promoter, the phosphate mannose lasmorase selectable marker and the cauliflower mosaic virus

```
Altering the expression of a viral genome, to obtain cells, plananimals that are resistant or tolerant to viruses, comprises us sense and antisense RNA fragments that form double-stranded RNA molecule -
                                                                                                                                                   The present sequence is plasmid p2U634, a chimeric gene cassette comprising the coding sequence for coat protein (CP) from Potato Y (PVY). This plasmid comprises a ubiquitin3 (Ubi3) promoter plus
                                                                                                                                                                                                                                         preferably plant cells, animals or their progenies resistant or tolerant to viruses such as tospoviruses, potyviruses, potexviruses, tobamoviruses, luteoviruses, cucumoviruses, bromoviruses,
                                                                                                                                                                                                                                                                                                        second DNA sequence capable of expressing an antisense RNA fragment of the viral genome. The sense and antisense RNA fragments are capable of forming double-stranded RNA. The method is useful for rendering cells,
                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to methods of altering the expression a viral genome, comprising introducing into a cell, a first DNA seq capable of expressing a sense RNA fragment of the viral genome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 14; Page 67-71; 75pp; English

This plasmid also comprises a ubiquitin3 (Ubi3) promoter plus leader intron. SMAS promoter, nopaline synthase (NOS) terminator, actin2 intronL, PWS1 ORI, pUC19 ORI and coding sequences for phosphomannose isomerase A and bacterial spectinomycin-detoxifying enzyme, aminoglycoside-3'-adenyltransferase. This plasmid is used to confer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to methods of altering the expression of a viral genome, comprising introducing into a cell, a first DNA sequence capable of expressing a sense RNA fragment of the viral genome and a second DNA sequence capable of expressing an antisense RNA fragment of the viral genome and an artisense RNA fragment of the viral genome. The sense and artisense RNA fragments are capable of forming double-stranded RNA. The method is useful for rendering cells, preferably plant cells, animals or their progenies resistant or tolerant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Altering the expression of a viral genome, to obtain cells, plants or animals that are resistant or tolerant to viruses, comprises using sense and antisense RNA fragments that form double-stranded RNA molecule -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tobamoviruses, luteoviruses, cucumoviruses, bromoviruses, closteoviruses, tombusviruses and furoviruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 14; Page 62-65; 75pp; English.

                                                                                                                                                                                                                                               A heterologous gene encoding a gene product which confers
C trichothecene resistance can be used to transform plant cells to
C make them resistant to fungal infection. The transformation method is
Useful for preventing mycotoxin contamination of a plant,
C particularly a crop plant such as wheat, maize, barley or rice, and
C for reducing and/or preventing the growth of a fungus of the genus
C Fusarium that produces a trichothecene, preferably comprising a C-3
C hydroxyl group, by growing transformed crop plants in an area which
C comprises the Zea mays ubiquitin promoter, the phosphate mannose
C isomorase selectable marker and the nopaline synthase
C termination sequence. pNOV1704 further comprises the Zea mays
Usiquitin promoter operably linked to the trichothecene 3-0-acetyl
C transferase sequence given in GENESEQ record A54206 and the nos
C termination sequence.

The invention describes the design and construction of a chimeric insecticidal protein, termed hyFLIB (see Y31990), encoded by a synthetic maize-optimized gene (see Y31990), and composed of a crylB core N-terminal toxin portion and a crylA(b) C-terminal protoxin portion. When HyFLIB is expressed in transgenic maize, insecticidal activity is observed against European corn borer 
                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (Ostrinia nubilalis). Recombinant microbial strains transformed with the hyFLIB gene can be used in endotmocidal formulations for the biological control of Lepidopteran pests.
